## ANOTHER GREAT DELIVERY ACHIEVEMENT

The final painted parts successfully delivered to Airbus in Toulouse, France, for last inspection [Sept 2020]

By Intan Syamimi

After meticulous planning and conscientious hard work by both CTRM and Collins teams, coupled with fifteen hours' time difference, **CSN 0001 A350 Fan Cowl NEP** panel was successfully delivered to Airbus Toulouse France for final assembly before reaching its final destination, Iberia Airlines in Madrid, Spain.

Looking back, it was in July 2018 when Collins launched a new variant of A350FC (Fan Cowl), which is known as the Nacelle Enhancement Program (NEP) replacing both A350FC -900 and -1000 variant. The new design aims to lead to weight and cost reduction.

Joint-Production team from CTRM & Collins [Feb 2020]

CTRM first produced the first composite panel in October 2019 and later in January 2020, a team from Collins joined together on-site with CTRM to continue manufacturing and completing the First Article Inspection (FAI) panel, aptly describes as CSN 0001 until its delivery to Collins on 4-Feb-2020.
